# TMC SPECIFICATION NO. S- 238

TITLE: MODIFICATION OF MODEL FFR TO FFR-2

JOB

APPROVED *ARB*

Object: This specification is intended to tabulate the information required to modify the basic FFR receiver to the FFR-2 receiver.

The FFR-2 receiver is intended to be a universal unit which in general requires no additional modification to meet requirements.

Main Chassis: The following specifications should be consulted and observed before the receiver chassis has been so modified.

S-200 Wiring Change in Power Supply

S-210 Cathode Resistor 6AQ5

S-213 Lowering of Audio Distortion

1. Installation of additional antenna input connector.

(J109) SO-239. This jack is installed as shown on drawing A-139. The inner conductor is led to one of the 75 ohm inputs on the Antenna Terminal Board.

2. Terminal Board E101- This terminal board is re-wired as shown on drawing CK-279. The terminal board then should be stamped as shown on the same print.
